Accredited

Clinically proven to off load over 80% of the plantar surface of the foot. The redesigned Bohler Walker with a broad based sole encourages a normal heel-to-toe gait for early non weight bearing allowing patients to ambulate quicker and be discharged early, saving time and money. It has a low profile non slip sole that allows the patient to ambulate easily. Replacement head plates are available if the walker has to be taken off and reapplied. The moulded side arms allow for a greater variety of patient anatomies. The donning plate is removed after application to maintain the non-weight bearing position. The cast can be removed, checked and reapplied with the confidence that the patient is not weight bearing. Also has a heel support strap.

Indications for use

- » Complex distal tibial fractures
- » Complex ankle fractures
- » March fractures
- » Calcaneus fractures
- » Non weight bearing
- » Diabetic Ulcers
- » Charcot Foot
- » Patient with multiple injuries/non tolerant of crutches

Features and benefits

- » Low profile non-slip sole allows patient to ambulate easily
- » Replacement head plates available if walker has to be taken off and reapplied
- » Moulded side arms means the walker will fit a majority of patient anatomies
- » Heel support strap
- » Donning plate; removable after application to maintain non-weight bearing position
- » Allows TCC to be removed, checked and reapplied with the confidence that the patient is not weight bearing
