Dispatch

ISO:13485
Accredited

The Patella Knee Strap is manufactured in the UK by Beagle Orthopaedic. BeaCool material is lightweight and breathable, which allows moisture to wick away from the skin. The material is ventilated and made with an AEGIS Microbe Shield® Anti-bacterial coating, making it ideal when a product is worn continuously for extended periods. The Anti-bacterial properties eliminate odours and offer protection against bacteria, mould, mildew, and other hazardous microbes, helping extend the life of the brace. BeaCool material also provides compression for full-contact support.

The strap is designed with non-slip technology, meaning it will not migrate while wearing. The two reinforced stabilisers above and below the patella provide targeted compression while keeping the kneecap in place. This helps prevent displacement without restricting movement and provides support to the patella. The two large hook and loop closures provide easy adjustment for the amount of compression needed. The universal size will fit most, while the universal design means the strap can be used on either the left or right knee.

Indications for use

- » Jumper's knee
- » Arthritis
- » Patella Tendonitis

Features and benefits

- » Designed to relieve the pressure and stress on your knee while recovering
- » Acts as an aid to preventing injuries
- » Retains body heat to stimulate the blood flow and accelerate healing process
- » Two generous hook and loop closures allow you to adjust the amount of compression to suit your needs
